USER GUIDE

Plattenregal

Your Discogs collection –
and where every record sits on the shelf.

VERSION 1.0.4 · MACOS 27 · APPLE SILICON

WELCOME

Good to have you here.

Plattenregal brings in your collection and your wantlist from Discogs – and remembers on which shelf, in which compartment and at which spot every record sits.

On top of that there are a search right from the menu bar, statistics with the value of your collection, a search list for records you can't find right now, a sale list, backups of your shelf layout and exports as CSV or PDF. This guide takes you from installing to your first filled shelf in a few minutes.

What you need

- A Mac with Apple silicon (M1 or later). Plattenregal doesn't run on Intel Macs, as macOS 27 is only available for Macs with Apple silicon.
- **macOS 27** or later.
- A Discogs account with your collection. The account is free. You can also try Plattenregal with the built-in demo first.

01 INSTALLING

On your Mac in three moves

1. **Open the disk image.** Double-clicking **Plattenregal-1.0.4.dmg** opens a window with the app icon, an arrow and the Applications folder.
2. **Drag Plattenregal to Applications.** Simply drag the icon onto the folder next to it. You'll find this guide in Plattenregal at any time under **Help → User Guide**.
3. **Eject the disk image.** Click the eject button next to "Plattenregal" in the Finder sidebar. You can delete the DMG file afterwards.

ONLY THE FIRST TIME

macOS asks once

Plattenregal is a private app and not notarized by Apple. That's why macOS stops the first launch when the app came from the internet, via AirDrop or by mail. You only need to do this once:

1. Open Plattenregal in Applications. macOS says the app was not opened. Click **Done**.
2. Open **System Settings → Privacy & Security** and scroll down to "Security". There it says: "Plattenregal" was blocked to protect your Mac.
3. Click **Open Anyway** next to it, confirm with your password or Touch ID and in the next window once more with **Open Anyway**.

After that, Plattenregal starts like any other app.

Installing a new version

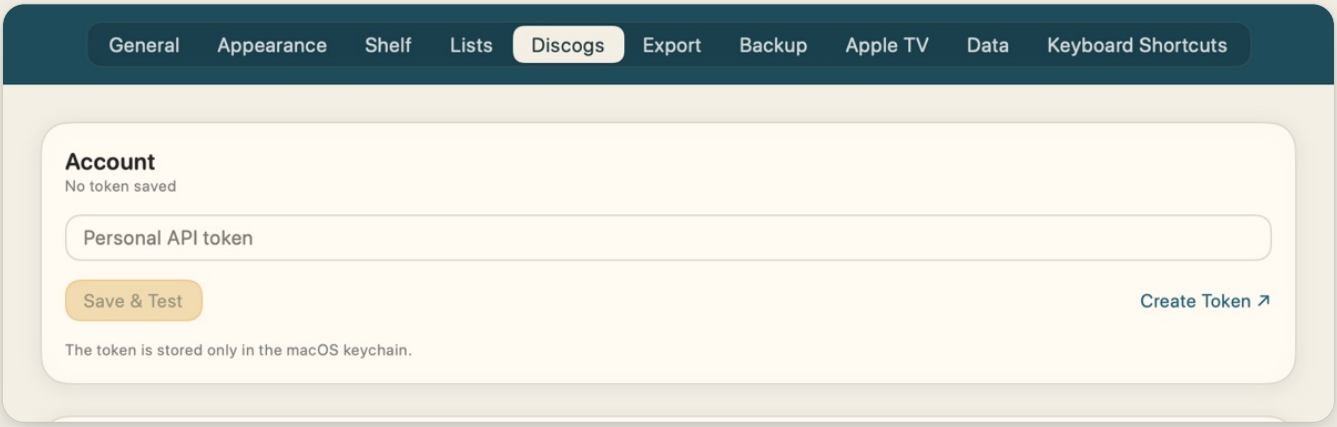

Drag the new version to Applications the same way and let it replace the old one. Your collection, your shelves and your token stay, as they aren't stored inside the app. If macOS asks whether Plattenregal may use your keychain, choose **Always Allow**: that's where your Discogs token is kept. The "Open Anyway" step may be needed once more. Plattenregal checks for a new version once a week on its own and then shows a window with the download – how often is up to you under **Settings → General** (weekly, monthly or never); to check by hand, choose **Plattenregal → Check for Updates…**

02 CONNECTING DISCOGS

Your collection comes from Discogs

Plattenregal doesn’t create records itself. Everything you see comes from your Discogs account. To get to it, you need a **personal token**, a kind of key for the Discogs API. Plattenregal only reads with it and never changes anything on Discogs.

1. **Create a token.** Sign in on discogs.com and open **Settings → Developers**. The quickest way is **Create Token ↗** in Plattenregal.
2. Click **Generate new token** there and copy the long string.
3. **Enter the token.** In Plattenregal, press ⌘, , choose the **Discogs** tab, paste the token and click **Save & Test**.
4. **Sync. Sync Everything** loads your collection and wantlist, the tracklists follow in the background. Discogs allows 60 requests a minute, so with a large collection the first time takes a while. Plattenregal only saves once everything has loaded completely.

Settings → Discogs: the token field, “Save & Test” and the link to Discogs.

Your token stays with you

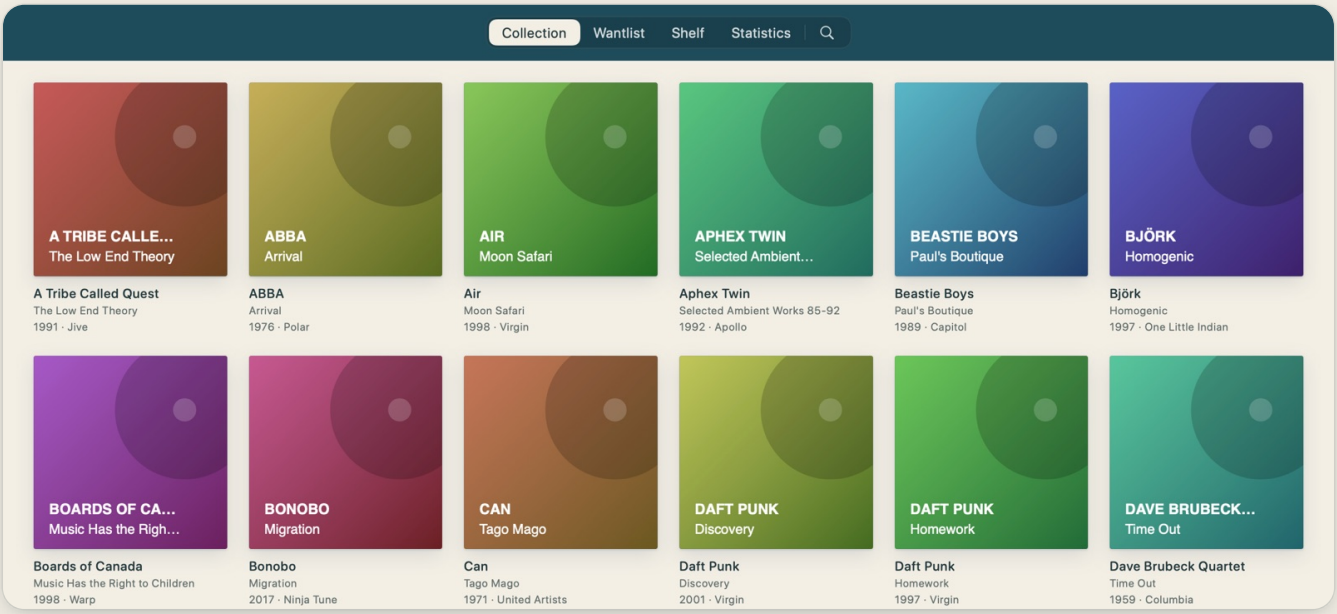

It’s kept only in the macOS keychain, on this Mac alone. It never ends up in files, settings or the log. On the internet, Plattenregal only talks to Discogs and, to check for updates, to GitHub, always encrypted. The token only goes to Discogs.

Want to try it first?

The welcome on first launch takes you straight to the field with **Enter Token…** Instead, **Start Demo…** opens a sample collection of about 50 albums. Change whatever you like there, nothing is saved. Later: **Help → Getting Started**

03 A QUICK TOUR

Four sections, one window

The collection in the Classic design. At the top the sections with the search, at the bottom right the round button.

Collection

⌘1

All your records as a cover grid or a list. Clicking a cover shows details and the tracklist; clicking a track opens it on YouTube.

Wantlist

⌘2

What you're still looking for, straight from your Discogs wantlist.

Shelf

⌘3

Your shelves with their compartments and which record sits where.

Statistics

⌘4

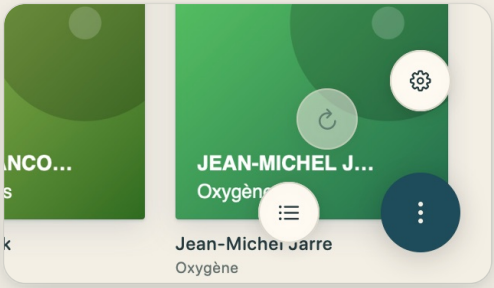

Collection value, its history and breakdowns by artist, style and year.

Searching

The magnifying glass at the end of the sections at the top (⌘F) opens the search field. It finds records by artist, title, label, catalog number, genre, style and more. esc clears the search. On the shelf page the search shows right away which compartment a record is in.

More with a right-click

Right-clicking a cover offers to show the record on the shelf, to find a spot for it or to open it on Discogs.

The round button fans out: grid or list, sync, settings.

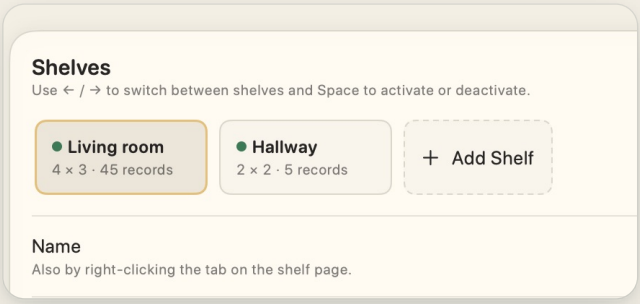

You can also refresh with ⌘R or by pulling down with two fingers on the trackpad.

04 SETTING UP YOUR SHELVES

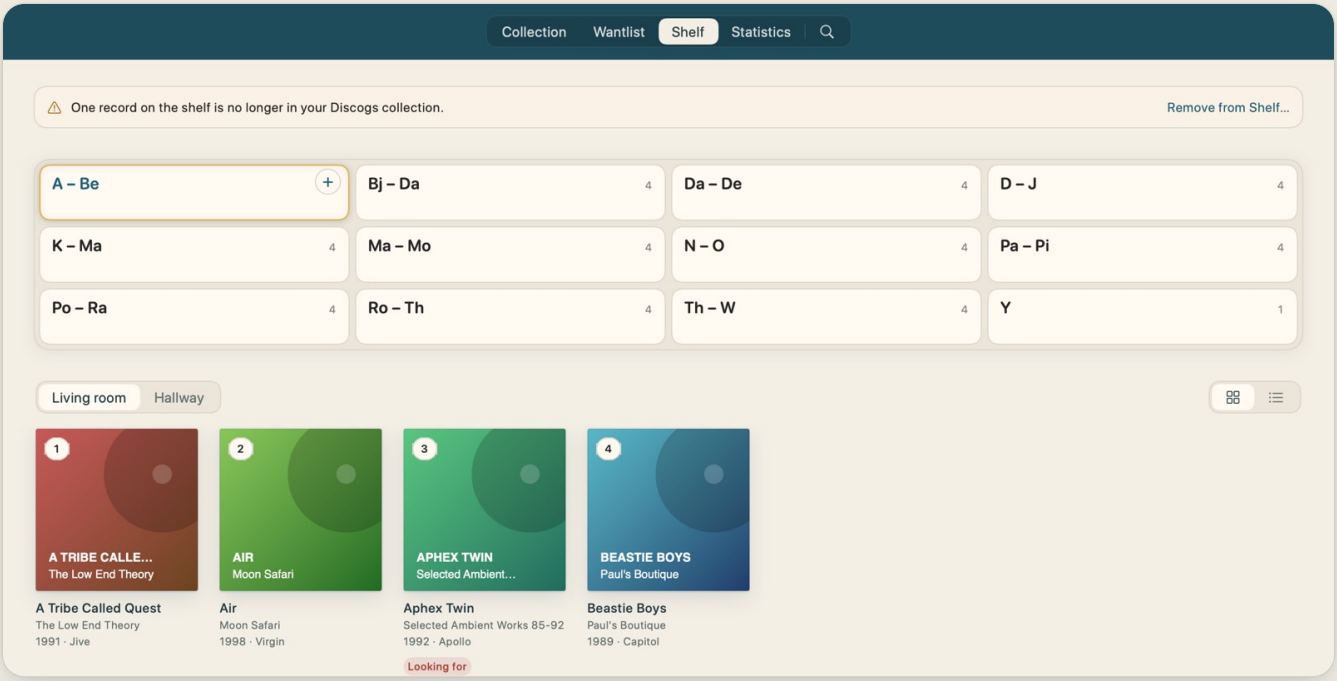

First the shelf, then the records

Plattenregal doesn’t know your real shelf on its own. You set it up once, in IKEA KALLAX sizes or entirely your own with 1 to 6 columns and rows. Several shelves, say in the living room and the hallway, are no problem.

1. Press ⌘, and open the **Shelf** tab.
2. Click **Add Shelf**, give it a name and choose its **size**.
3. Compartments that shouldn’t hold records, for decor for example, can be **locked** and named.

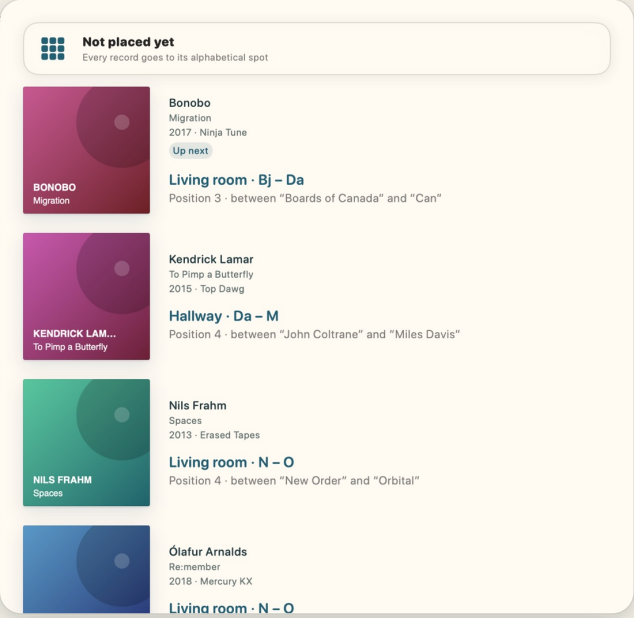

Settings → Shelf: add shelves, name them, choose their size.

The shelf page: the compartments with their letter range and number of records at the top, below them the shelves as tabs on the left and grid or list on the right, at the bottom the contents of the selected compartment (gold border).

Plattenregal names the compartments itself after the letter range they hold, for example “A – Be”. A click selects a compartment. Below it, its records appear in their order, as covers or as a list. Clicking a cover opens “Edit Copy”, where a slider moves the record to another position.

Every record in its place

"Not placed yet" shows shelf, compartment, position and the neighbours on either side for every record.

Placing

The round **+** button at the bottom right of the shelf page lists every record without a spot yet, alphabetically by artist. Each one shows where it belongs. Put the record on your real shelf and click its row, and Plattenregal remembers the spot.

Add Record

To fill one compartment on purpose, move the pointer over it and click the small **+** at its top right.

Check Order

Right-click a compartment → **Check Order**. Plattenregal shows the fewest moves that put the compartment back in order, step by step to tick off. Always by artist, and for the same artist by title, year or label as you choose.

Kept off shelf

Records that never go on the shelf, singles in a box for example, can be marked **Kept off shelf** with a right-click. Plattenregal then no longer offers them for placing.

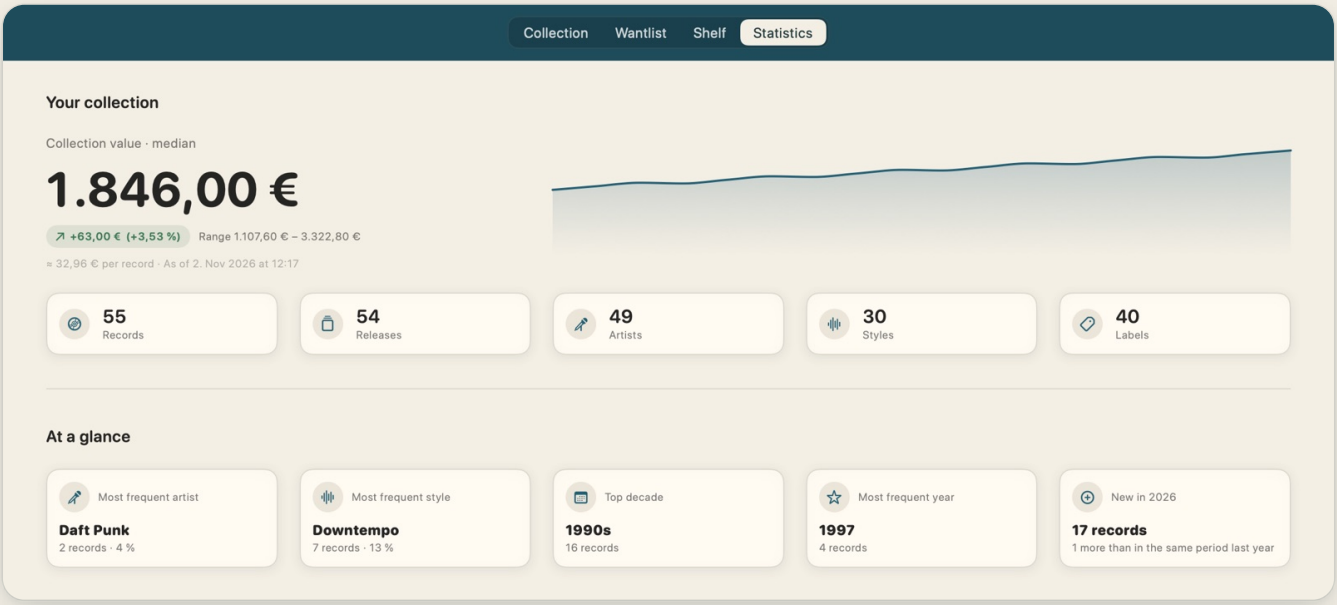

Search list "Looking for"

Can't find a record right now? Right-click → **Add to Search List**. In its compartment it then carries the tag "Looking for". Under Settings → Lists you tick it off as found.

Sale list

With **Mark for sale** you collect records that may go. They stay where they are. **Sold** under Settings → Lists takes them all out of their compartments at once.

What your collection is worth

The statistics: collection value according to the Discogs marketplace, its history and breakdowns of your collection.

The statistics show what your collection is worth at Discogs marketplace prices and how that develops. On top come figures on artists, styles, labels and decades, and a **Random pick** that suggests a record from your collection with ⇧⌘R. Refresh with ⌘R.

Backup

The records themselves can always come back from Discogs. **Where they sit on the shelf exists only on your Mac.** That's why Plattenregal backs up the layout automatically after every change. Under Settings → Backup you can choose a folder of your own, in iCloud Drive for example. There you can also bring back an earlier state and see beforehand what will change.

Export

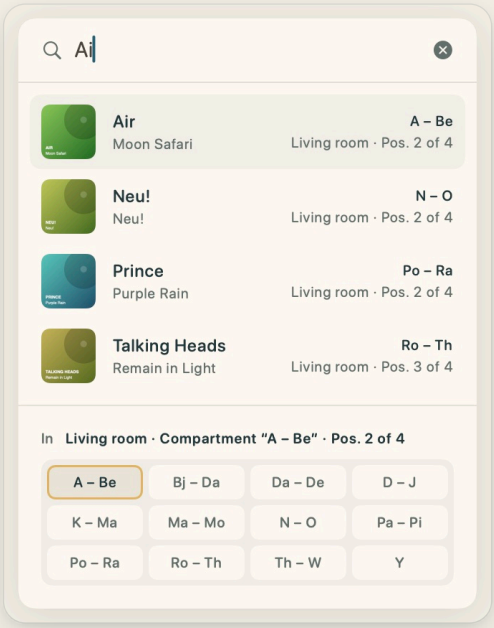

Under Settings → Export you turn your collection, wantlist or sale list into a **CSV file** for Excel and Numbers or a **print-ready PDF list**, in shelf or alphabetical order. If you like, Plattenregal writes them to a folder daily, weekly or monthly.

Searching without a window

Plattenregal doesn’t need to be in front for this. A click on the small record at the top of the menu bar or ⌥ Space opens a search field over whatever is open, even over other apps.

After a few letters the matches are there, each with its compartment, shelf and position. The compartment of the selected match lights up in gold in the shelf in miniature below. A click holds the match, so you can walk over to the shelf at your own pace – or it shows the record in Plattenregal or on Discogs, as you choose in the settings. esc clears the field, a second time closes the search.

After ⌘Q Plattenregal keeps running without a Dock icon, so the search is always there. To quit completely: ⌥⌘Q or right-click the record. Choose where the search appears and how it looks under Settings → General, where everything can also be switched off.

The search from the menu bar: matches with compartment and position, below them the shelf in miniature.

The settings

Open the settings with ⌘, or the round button. Under **Appearance** you choose between the designs **Modern** with Liquid Glass and **Classic** as in this guide.

TAB	WHAT YOU’LL FIND THERE
General	Language (German or English), start page, open at login, menu bar and background, updates, demo
Appearance	Design, light or dark, colors, your own names for the sections, grid or list, order and cover size
Shelf	Add and change shelves, lock compartments, sorting and labeling
Lists	Turn the search list and the sale list on or off and work through them
Discogs	Token, connection test, sync
Export	CSV or PDF, automatic export to a folder
Backup	Back up and restore the layout, automatic backup, location
Data	Storage, cover cache, log, reset
Keyboard Shortcuts	All shortcuts to look up

08 WHEN SOMETHING'S OFF

Little helpers

YOU SEE	WHAT HELPS
"Plattenregal" not opened	Allow it once under Privacy & Security, see page 3.
Token not accepted	Check the token on Discogs or create a new one, and enter it again under Settings → Discogs.
Keychain prompt	Happens after an update. Choose **Always Allow**.
"Plattenregal is already open"	The app is running a second time. Quit the other one, your data isn't affected.
Record missing from the collection	What you newly add on Discogs shows up after the next sync: `⌘R`.
Record of the Day on the desktop	Right-click the desktop → **Edit Widgets** → **Record of the Day**. A click on it shows the record on the shelf.
Shelf emptied by mistake	Restore an earlier state of the layout under Settings → Backup.
Starting over	Settings → Data → Reset. Plattenregal backs up the layout first, backups are kept.

Reporting a problem: Under Settings → Data → Diagnostics, save the log to a file with **Save As…** Add the version from **Plattenregal → About Plattenregal**. The log never contains your Discogs token.

Enjoy digging and listening.

Plattenregal 1.0.4 · by Patrice Werner · for macOS 27 on Macs with Apple silicon.
Your data stays on your Mac. Plattenregal only talks to Discogs and, for updates, to GitHub, and sends nothing about you to third parties.

This application uses Discogs' API but is not affiliated with, sponsored or endorsed by Discogs. 'Discogs' is a trademark of Zink Media, LLC.
